

Welcome to MedA/Rx

MedA/Rx

MedA/Rx is a new way to think about revenue cycle management for the healthcare financial professional.

We have combined the power of a state of the art accounts receivable management firm with a highly sophisticated health care financial consulting team. This combination through sister companies PMAB and MBOC respectively, with their unmatched intellectual horsepower, technical expertise, and executional skills deliver far superior results for your bottom line.

Through our two companies we take a holistic approach to your revenue cycle, whether your organization is concerned about coding and denial tracking, or needs outside help to get your receivables back on track, our highly specialized teams can assist you.

PMAB: By embracing technology we have radically changed the face of outsourced A/R management. Through working closely with MBOC we have created a proprietary account scoring algorithm that allows us to carve up the A/R data and create a superior patient contact rate. We then feed this data into our state of the art predictive dialer which leads directly to a higher close rate and maximized internal cash flows for our clients.

MBOC: Through a traditional healthcare consulting approach, we work with your organization to achieve best practices and ultimately improve the quality of your receivables as they move through your system.

MBOC and PMAB although being very different in their physical deliverables, are very much interrelated in the MedA/Rx family. The analytical skills and quantitative analysis performed by MBOC feed directly back into PMAB.

MedA/Rx was created to extract all the power and synergies from two sister companies, PMAB and MBOC. We firmly believe that our advanced analytical tools housed under our consulting arm, (MBOC), when teamed up with the state of the art executional tools and people at PMAB, delivers unmatched results for our clients. Whether you need a full blown consulting engagement or just need extra resources to keep your cash flow in line, MedA/Rx, has the people and technologies to service your needs.
